

HFM Front Mount Pump

750 - 1250 GPM

The Closer You Look... the more you will appreciate our quality and design. Because we build our pumps with nothing but the finest materials and components, assembled as only the most experienced craftsman know how.

Hale front mounts provide pump-and-roll capability with full NFPA 1901 compliance. They have single-stage design for ease of operation. Best of all, they're built by Hale.

For pump-and-roll grass fire fighting or drafting from ponds and streams, there are no pumps like Hale front mounts. They are extremely rugged, with a range of capacities to meet your needs. And they are built with the same unique design features that have made Hale the leader in the firefighting industry.

Features and Benefits

Maintenance free mechanical seal eliminates pump packing adjustments and maintenance
High quality fine grain bronze impeller
Oversized relief valve with pressure control valve and light
Corrosion resistant stainless steel pump shaft
One Piece Pump Volute
Very compact design

STANDARD FEATURES

- Bronze impeller, individually balanced and matched with renewable bronze clearance rings.
- Electric rotary vane, positive displacement priming system with single panel control activation.
- Stainless steel ball-type "droop" discharge valves with self-locking handle feature to gate valve in any position.
- Oversized deep-groove ball bearings for maximum efficiency and long life.
- Other standard features include chrome-plated discharge and suction caps, speed counter connection and throttle indicator lights.

Hale pumps go where the action is. And when they get there, they deliver. That's why more firefighters around the world rely on Hale Front Mount Pumps.
