

CAFSPro® Rear Mount SMR-AC-140 System

Hale takes the guesswork out of specifying a Compressed Air Foam System by incorporating the most desirable features of a CAF system into an integrated and tested system that is easy to install and operate.

Fully Integrated System

The Hale CAFSPro Rear Mount CAF system is not a pieced-together collection of unrelated components. It is an integrated, fully engineered addition to the firefighting capability of the Hale rear mount pump. Available on the SMR-A Pump, the system can provide these foam discharges: one 2-1/2-inch CAFS discharge, two 1-3/4 inch CAFS discharges, and one 1-3/4 inch foam solution only discharge.

The Hale CAFSPro is designed to give all the advantages of foam and compressed air foam without the disadvantages of complex installation and operation. Operation is virtually as simple as operating a standard “plain water” pumper. Engage the pump and the system performs a self test and is immediately available to make compressed air foam. Make changes with a simple touch of a button and the integrated Class 1® CAFS controls automatically respond.

Easiest to use CAFS in the industry!
