Qmax-XS Solid Model Update

PB-1060

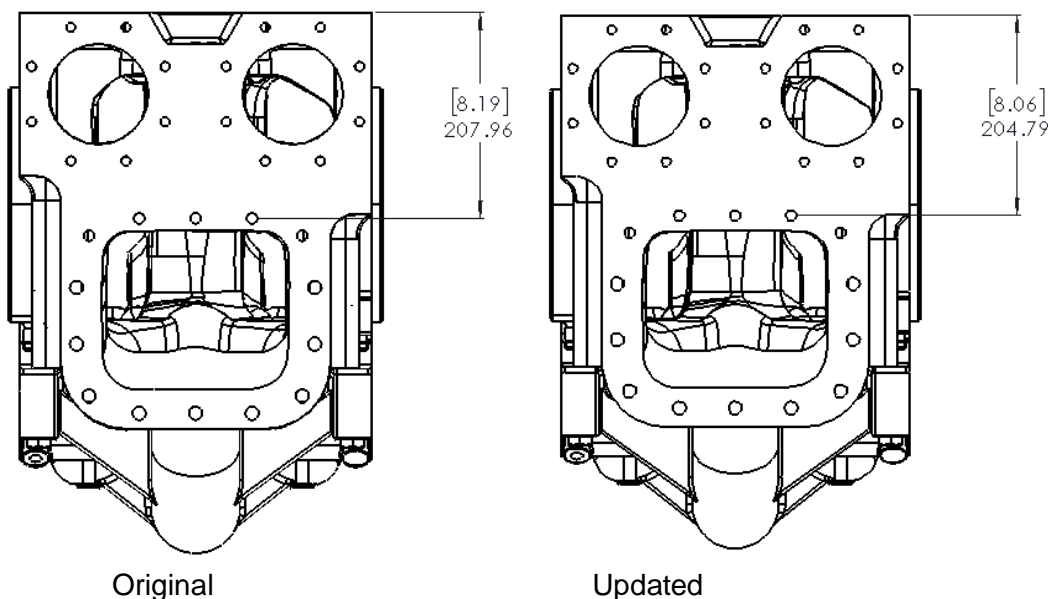

PRODUCT NAME: Qmax-XS

AFFECTED CONFIGURATIONS: Solid Models

Hale's engineering team found a discrepancy with the Qmax-XS solid model and installation drawing that could cause panel alignment issues. The dimension from the top of the pump to the machining for the suctions was off by 0.13" (Shown below) which can affect the plumbing coming out of the panel and may cause misalignment.

This update will not change the product you have been receiving. The solid model and prints were updated to match the outgoing QMAX-XS assemblies.

The team has updated the models and they have been posted to Hale's website. Please take a moment to update your models to ensure the panel alignment issue is fixed.
