SERVICE BULLETIN #12

TO: ALL MAJOR PUMP CUSTOMERS

SUBJECT: Replacement of Type ZS and QL Relief Valve Controls

Gentlemen:

It has always been Hale's policy to give the customer the best, for servicing and maintenance of their original equipment. To this end we are offering our PM Relief Valve Control to replace the ZS and QL Relief Valve Controls, (which are no longer in production) for all Hale centrifugal pumps.

The PM Relief Valve Control is of the latest design and maintains a smoother and a broader range of control.

A large number of these replacements have been accomplished by Hale Service Department and customer response to the change has been very favorable.

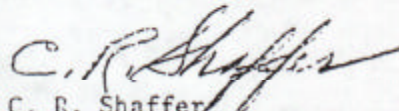

The subject Controls can be replaced with the PM Control by one of two ways:

- (1) With the Indicator Light.
- (2) Without the Indicator Light.

When the occasion arises and it is necessary to replace the ZS or QL Control, include in your order the serial number of the pump for which the replacement is required.

If any assistance is needed to not hesitate to contact Hale's Service Department.

Very truly yours,
HALE FIRE PUMP COMPANY

C. R. Shaffer
Service Manager
