

## PRODUCT BULLETIN

Hale is now offering a Midship "G" Gearbox manual shift override kit for shipment beginning in July. Even though NFPA 1901 and most Hale customers do not require this type of override, some OEM's have offered various override setups in the past as an option.

Midship "G" Gearbox Manual Shift Override Kits will be offered as an option. The main part of the system is premounted on the gearbox. The cable, accompanying brackets, and hardware are shipped loose.

The kit must be specified on the new pump order form as an additional line item.

A kit is offered with either a 72" or 55" control cable. A reference drawing (101-0850-73-0) is enclosed which depicts the system.

Push-pull kits utilize a T-handle and incorporate additional leverage to lower shift forces to approximately 25 pounds. A mechanical Turn-to-Override system is also offered. A reference drawing (101-0850-74-0) is enclosed which depicts this system.

### PART NUMBERS
